GOLD PRICE FORECASTING BASED ON FUZZY MULTI-FACTOR TIME SERIES METHOD

(September 2025 - August 2026)

SCAN ME

Accuracy Models

MAPE of 1.65%, indicating very high historical accuracy.

Gold Price Range

The predicted range is between Rp1,750,000 - Rp1,850,000.

Why This Matters?

Problem

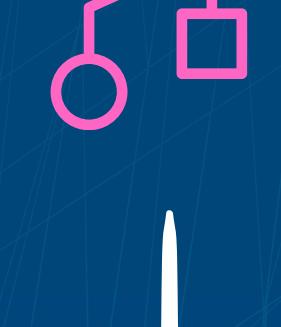

Everyone knows gold is valuable. But when's the right time to buy? Its price fluctuates throughout the year, making it difficult to decide.

Solution

Our forecasting model provides accurate gold price predictions, helping you find the best time to invest with confidence, clarity, and better decision-making.

Methodology

Data Preparation & Processing

Modeling & Evaluation

Forecasting

Key Factors

Policy Rate

BI Interest Rate

Inflation Rate
